

## Production Manager

### Our company:

Sorpton Technologies GmbH has developed a new type of adsorption chiller for waste heat recovery in industrial applications. Currently, we are building up a workshop for production and testing of our new products. We are searching for a highly motivated production manager to join our team in Mönchengladbach (Germany) and contribute to the build-up and growth of our company. In this role, you will be responsible for planning, organizing, and coordinating production activities to ensure efficient manufacturing processes. You will join our current activities in building up our production infrastructure in several steps with an increasing portion of automatization as well as leading production meeting and targets, while maintaining quality standards and safety protocols.

### Responsibilities:

- Develop production schedules and workflows to optimize resources and automatic production.
- Supervise and manage production staff, including hiring, training, and performance evaluations.
- Implement and oversee process improvements to enhance productivity, reduce waste, and ensure cost-effectiveness.
- Monitor production processes and adjust schedules or resources to meet changing demands.
- Ensure adherence to quality standards and procedures throughout the production cycle.
- Implement quality control measures to maintain product consistency and reliability.
- Manage inventory levels and coordinate with procurement to ensure timely availability of raw materials or components.
- Minimize inventory discrepancies and manage stock levels efficiently.
- Uphold health and safety regulations and standards within the production environment.
- Implement safety protocols and provide training to ensure a safe working environment.
- Prepare production reports, analyze data, and identify areas for improvement.
- Collaborate with other departments to optimize production processes and address issues.

### Requirements/ Qualifications:

- Bachelor's degree in engineering, manufacturing, business administration, or related field; relevant experience may substitute.
- Proven experience in production management or a similar role within the manufacturing industry.
- Strong understanding of production processes, quality control, and inventory management.
- Leadership skills with the ability to manage and motivate a team.
- Proficiency in production planning software and familiarity with relevant technology and tools.
- Excellent problem-solving and decision-making abilities.
- English skill is necessary. German skill is preferred.
- Full time, on site at Mönchengladbach (Germany)
